The term “young worker” can include teens, young adults, and anyone new to the workforce. Young workers want to perform well at work, but they need help to work safely. The following risk factors should be considered when employing youth because they often:

- Lack on-the-job experience, including an understanding of the risks associated with each job.
- Feel invincible and may be more apt to take risks on the job.
- Are not aware that they have rights and responsibilities and some job tasks are illegal for them to do.
- Have trouble relating cause and effect and therefore don’t consider how an injury today could disable them for life.
- Have a desire to prove themselves and, therefore, may do unsafe things.
- Are reluctant to ask questions.
- Lack awareness of risks on the job, including the fact that they could be killed while at work.

Employers should take the following steps to help prepare youth to work safely. Young workers will take what they learn with them throughout their working career.

**Teach young workers how to identify hazards because they often:**

- Don’t realize that hazards exist in every working environment:
  - Physical hazards
  - Biological hazards
  - Chemical hazards
  - Other (noise, vibration, radiation, etc.)
- Assume that you (the employer) have protected them. They may not realize that staying safe is their responsibility as well. Help them understand the need to protect themselves with the use of critical thinking, hazard recognition, and personal protective equipment.
- Don’t know where to find safety information on the chemicals used in the working environment.

**Training youth to work safely is a multistep process:**

- **Give** them clear instructions and tell them what safety precautions to take.
- **Ask** them to repeat your instructions and give them an opportunity to ask questions.
- **Show** them how to perform the task.
- **Watch** as they do the task and correct any mistakes until they complete it correctly.
- Finally, **ask** if they have any additional questions.
- **Check** again later to verify they continue to do the task correctly and safely.

**Help them find ways to make the job safer:**

- Educate young workers on the safety procedures of your establishment, including how to use personal protective equipment (PPE).

- Young workers may not understand the three control measures that can be used to keep them safe:
  - Engineering controls that remove the hazards
  - Work policies that control the hazard
  - PPE that creates a barrier between them and the hazard

**Tips for safely employing young workers**

Most injuries to young workers occur within the first 12 months of employment. So what can you do?

[youngemployeesafety.org](http://youngemployeesafety.org)
• Don’t let young workers work alone towards closing time or after dark.

Help young workers understand their rights:
• Most young workers aren’t aware that there are additional rules that apply only to them.
• Young workers may not know what agencies govern these rights or who to call with questions.

Teach them to take action if necessary:
• Young workers may feel intimidated approaching a supervisor or boss with concerns. Talk with them about who they should talk to if they feel something is unsafe.
• Young workers may do a task that is dangerous or that they are not trained for in an attempt to please the boss. This is often how young workers get injured on the job. During initial training encourage them to come to you if they feel uncomfortable or unsafe.

Ideas from other employers:
• Issue different colored vests to employees under the age of 18, so supervisors know who is not allowed to operate certain prohibited equipment, such as an electric meat slicer.
• Use a computerized tracking system to ensure that workers younger than 16 years of age are not scheduled for too many hours during school weeks.

On the first day of work, give all new young workers a laminated pocket-sized “minor policy card” which explains your company’s young worker health and safety policies.

Train all supervisors in the requirements of the federal and state child labor laws. Refresher training at periodic intervals is also equally important.

Place warning stickers on equipment that young workers cannot legally operate or clean. As part of YouthRules! The US Department of Labor is making these stickers available to employers through your local Wage and Hour Division office while supplies last. In addition, these stickers can be downloaded at www.youthrules.dol.gov.

• Conduct internal compliance checks to ensure you achieve and maintain compliance with all youth employment rules.

RESOURCES

Oregon Young Employee Safety
youngemployeesafety.org
The Oregon Young Employee Safety coalition (O[yes]) is a group of Oregon stakeholders that works to prevent young worker injuries and fatalities.

SAIF Corporation
sai.com/youngworkers
SAIF is Oregon’s not-for-profit, state-chartered workers’ compensation insurance company.

Oregon Institute of Occupational Health Sciences
ohsu.edu
Oregon Institute of Occupational Health Sciences’ mission is to promote health and prevent disease and disability among working Oregonians and their families.

US Department of Labor Wage and Hour Division
