

Hazard Communication Standard for Agricultural Employers

Agricultural employers have a responsibility to communicate to workers the hazards of the chemicals used in their workplace, as per OAR 437-004-9800.

The requirements were revised in 2014 to align with the Federal Hazard Communication Standard and the Globally Harmonized System of Classification and Labeling of Chemicals (GHS).

This information must be provided through a comprehensive hazard communication program — including container labels, safety data sheets (SDS), and employee training.

The rule states: *Give employees effective information and training on hazardous chemicals in their work area in new employees' initial hazard communication training, and when a new physical or health hazard is introduced into their work area.*

Training information must cover: A review of safety data sheets (SDS)

The review should include the information found in each of the 16 standardized SDS sections, such as first aid measures, safe handling of the chemical, and proper methods of containment. Likewise, review the location and availability of all SDS in your workplace.

The six required label elements for hazardous chemicals:

1. Product identifier

This can be the chemical name, code number, or batch number. The manufacturer, importer, or distributor can decide the appropriate product identifier. The same product identifier must be on the label and in section 1 of the SDS to allow employees to cross-reference the information.

2. Signal words

These indicate the severity of a hazard. There are only two signal words: "DANGER" and "WARNING."

There can be only one signal word on the label; for multiple hazards, only the more severe signal word is printed on the label.

3. Hazard statement(s)

These describe the degree of the hazard, and are specific to the hazard classification categories.

Chemical users should always see the same statement for the same hazard, no matter what the chemical is or who produces it. All of the applicable hazard statements must appear on the label, though they may be combined to improve readability.

4. Supplier identification

This includes the name, address, and emergency phone number of the chemical manufacturer, distributor, importer, or other responsible person.

5. Precautionary statement(s)

These are phrases that describe measures that should be taken to minimize or prevent adverse effects resulting from exposure to a hazardous chemical or improper storage or handling. These may include first-aid instructions and what to do in case of fire.

6. Pictogram(s)

OSHA's nine standard pictograms are red diamond-shaped with black hazard symbols:

Corrosive

Nature polluting

Explosive

Harmful

Non-flammable gas

Flammable

Hazardous to health

Oxidizing

Toxic

The labels can list supplemental information as well.

This is the typical look of a label in compliance:

SAMPLE LABEL

CODE _____ Product Name _____	} Product Identifier	Hazard Pictograms	
Company Name _____ Street Address _____ City _____ State _____ Postal Code _____ Country _____ Emergency Phone Number _____		} Supplier Identification	 
Keep container tightly closed. Store in cool, well ventilated place that is locked. Keep away from heat/sparks/open flame. No smoking. Only use non-sparking tools. Use explosion-proof electrical equipment. Take precautionary measures against static discharge. Ground and bond container and receiving equipment. Do not breathe vapors. Wear protective gloves. Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling. Dispose of in accordance with local, regional, national, international regulations as specified. In Case of Fire: Use extinguishing measures that are appropriate to local circumstances and the surrounding environment. First Aid If exposed call Poison Center. If on skin (or hair): Take off immediately any contaminated clothing. Rinse skin with water.	} Precautionary Statements		Highly flammable liquid and vapor. May cause liver and kidney damage.
			Hazard Statements
		Supplemental Information	
		Directions for use _____ _____ _____	
		Fill weight: _____ Lot Number: _____ Gross weight: _____ Fill Date: _____ Expiration Date: _____	

Note: Not all chemical labels are required to meet these requirements. For example, some pesticide product labels regulated by the Environmental Protection Agency are exempt, as are products regulated by the Consumer Product Safety Commission.

Procedures protecting employees

Specify any procedures implemented to protect employees from exposure to hazardous chemicals, such as personal protective equipment used, and appropriate work practices. Likewise, note any methods used to detect the presence or release of a hazardous chemical in the work area, such as alarm systems.

A review of printed materials

Agricultural employers must give all their employees a copy of Oregon OSHA publication #1951, "[Safe Practices When Working Around Hazardous Agricultural Chemicals.](#)" Other employers are encouraged to do so.
